

Ultra-Fresh

Wherever bacteria, mould, mildew and fungi compromise product performance, Ultra-Fresh will take control. Ultra-Fresh antimicrobial treatments inhibit the growth of bacteria and fungi responsible for creating unpleasant smells and staining in textile and plastic products. By controlling unwanted microbes, Ultra-Fresh antimicrobials help to keep products fresh, clean and odor-free.

Easily Applied

Ultra-Fresh is applied at the manufacturing stage to enhance your products. It can typically be incorporated into existing processes, meaning no special equipment or extra production steps are required.

Safe, Effective, Responsible

Ultra-Fresh has had to pass the most stringent testing procedures for safety and efficacy to meet international regulatory guidelines. Ultra-Fresh is US EPA registered, BPR compliant and Oeko-Tex listed, and complies with all regulatory requirements of each country where it is sold. In addition to providing premium quality, we are committed to producing environmentally sustainable antimicrobial treatments. Acknowledging our social responsibility, we have partnered with bluesign® in our joint initiative for the removal of harmful substances and practices from the manufacturing process.

Available Around the World

Regardless of where you are located, our network of regional sales representatives will reach out to offer our antimicrobial expertise. We are happy to provide onsite technical support to ensure the treatment is optimized in the application process. Once applied, the Ultra-Fresh brand offers you a powerful marketing tool that expresses integrity and performance. Whatever your antimicrobial application, whatever your marketplace, Ultra-Fresh will allow you to promise increased satisfaction and better performance to your customers.
